

## List of literature changes

All flyers have been updated to a new design. New screenshots and images have been introduced where relevant, and new system drawings have been created for the different applications.

### Changes to content:

#### **Dispatcher flyer:**

Updated to reflect new Dispatcher design and functions, including geofencing and addition of an Application Server. New screenshots.

#### **Enhanced Bridge flyer:**

The Group Bridge flyer has been replaced by an Enhanced Bridge flyer, outlining the traditional as well as the new individual bridging functions.

#### **Network Management & Voice and Data Log System:**

Updated with security information and with information to reflect the introduction of multiple technologies.

#### **Hardware flyers (BS421, BS418, RDT, FMT):**

Updated to include information on integration with multi-tech products in a single network.

#### **BS422 flyer:**

Message in flyer updated in general – focus on benefits (core-connected, multiple technologies/one software, extended coverage etc.). Paragraph about VHF added to tie in with launch of VHF terminal; tables as well as standards & approvals.

#### **TEDS concept paper:**

Concept paper on TEDS created – outlining the benefits of the technology along with a range of different use cases.
